

Aquatics should be about enjoying life.
Not risking it.

WAVE actively assists your lifeguards by ensuring that they're always aware of a swimmer submerged longer than your facility deems safe.

If a guard needs to enter the water, WAVE alerts your facility so additional assistance can be provided.

- Simple to set up and use
- Works anywhere people swim
- Affordable

“Provides an unmatched level of safety.”

– B. Roy | Aquatics Director

“Allowed us to be a leader in safety.”

– D. Hein | CEO

“This product seriously saves lives!”

– M. Perhay | CEO

“Should be in every pool.”

– K. Cawthon | Aquatics Supervisor

Give your guards advanced tools to protect your swimmers.

Using comfortable lightweight wearables, WAVE accurately monitors lifeguards and swimmers, notifying your facility of any potential risk before it can escalate.

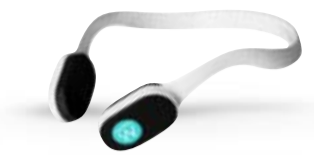

• Swimmer Submersion Alerts

If a swimmer remains submerged longer than your facility deems safe*, WAVE discreetly warns guards by vibrating a bracelet worn by each.

If the swimmer continues to remain submerged for an additional preset time*, WAVE will publicly notify your facility* with audio visual alerts.

Ultralight Headsets

For Goggle Users

Lifeguard Tags

• Lifeguard Entry Alerts

If the guard enters the water, the system will alert designated areas of your facility.

* Settings are determined by your facility

Wearables approved by the toughest testers of all: Humans.
